

Rowan Thomas Lumb

US & UK Dual Citizen

E-mail: rowan@rtlcoding.com Phone: 1-901-205-9075

Portfolio: rtlcoding.com

Verified Reviews: [upwork.com/freelancers/rowanlumb](https://www.upwork.com/freelancers/rowanlumb)

Schedule a Call: cal.id/rowan-thomas-edward-lumb/upwork-oceania

Skills

Programming: R, Python, Angular/Typescript, SQL, C++

Design: Computational Modeling, CAD, OpenCV (computer vision)

Mathematics: Machine Learning, Differential Equations (DEs/PDEs), Neural Networks, Statistics

Work Experience

Engineer/Developer — RTL Software LLC (Self-Employed) — August 2019 — Present

Extremely varied project-based work ranging from simple workflow automation to pre-treatment for mobile app data to full-stack SaaS implementations. Interested in actively moving more into the interface of software and hardware rather than pure software development.

Software Developer — View Glass — May 2018 — August 2018

Interned and developed Web Applications in a .NET environment utilizing RESTful API and Angular 2/Bootstrap Framework that was deployed in a manufacturing environment.

Graduate Teaching Assistant — University of Memphis — June 2017 — May 2018

Taught differential equations in mechanical, thermal, and electronic applications. Performed research using Big Data and artificial neural networks.

Research Assistant — Oak Ridge National Laboratory — June 2016 — August 2016

Assisted in magnetic mapping of UCNtau (experiment to precisely measure the half-life (τ) of the free neutron) apparatus to analyze possible systematic effects.

Research Assistant — Los Alamos National Laboratory — June 2015 — August 2015

Assisted in construction of Fast Ionization Chamber for new Gammasphere and Orruba nuclear detectors. Developed predictive R-process simulations using Root.

Research Assistant — Los Alamos National Laboratory — June 2014 — August 2014

Developed precise 3-D object tracking program using C++ and OpenCV open-source libraries to monitor object location within experimental apparatus.

Education

M.Sc. in Mechanical Engineering — University of Memphis — June 2017 — May 2019

Research/Thesis work in the acoustic emission non-destructive testing of fatigued 4340 steel and 7075 aluminum. Data analysis work utilized the R programming language and the application of supervised neural networks. Research published in Springer's Data Enabled Discovery journal: [springer.com/article/10.1007/s41688-020-0036-7](https://www.springer.com/article/10.1007/s41688-020-0036-7)

B.Sc. in Physics — Tennessee Technological University — August 2012 — May 2017
